5.0 RESOURCE REPORT 5 - SOCIOECONOMICS

The Project involves the construction, operation, and maintenance of approximately eight miles of new pipeline and ancillary facilities. These facilities may require up to approximately three additional employees for operation. No major aboveground facilities affecting employment, housing, local government services, local tax revenues, transportation, or other related socioeconomic conditions would be affected by this Project. Therefore, this Resource Report is not required. The following information is included, as appropriate, as part of Resource Report 1, General Project Description:

- number of construction items;
- approximate number of workforce for construction;
- duration of construction (e.g., days, months);
- anticipated time (e.g., spring, summer, winter, fall) and year of construction; and
- estimated number of new permanent employment positions created.
